

## Your legal practice can't afford the liability of data loss

For law firms and attorneys, your privilege and the associated legal matter is what drives your business. Your collaboration with third-parties and the vast library of data stored in multiple on-premises and cloud-based applications means your data is vulnerable. You can't afford to risk your business, your liability and your reputation due to a passive approach to your data security.

Privafy protects businesses from all types of data-in-motion threats. Data-in-motion is a term that describes data as it passes between locations, clouds, mobile devices and IoT. Your email, documents and legal matter is constantly moving across public and private internets as well as personal devices with multiple access points and inconsistent policies. The vulnerabilities, and attackers, are everywhere.

Privafy is delivered as a one-stop service that can be tailored to meet your needs as well as your budget and security requirements. It works over standard broadband and takes full advantage of cloud technology to stay always updated, and always a step ahead of the next generation of attacks.

Our security-as-a-service model lets clients protect new devices and locations as their business grows, without having to invest in expensive infrastructure. Non-degradable performance, as well as full service redundancy, ensures your data will always be protected, wherever it travels.

## Unsecured data-in-motion leads to ransomware attacks and data breaches

Critical data traveling among systems, locations, devices and the internet is highly subject to attack. In fact, according to International Data Corporation, more than 80% of all security breaches involve data-in-motion.

Traditional security infrastructures can't keep up. Encryption, routing, remote access, firewalls, deep packet inspection, intrusion detection and prevention exist as single point solutions in a complex matrix that's extremely expensive to acquire and own—and isn't always as secure as it needs to be.

## A better way to safeguard critical data, anywhere it travels

Privafy has developed a comprehensive, affordable, easy-to-use solution that protects data-in-motion via a cloud-based security service. The Privafy service is designed to give you unparalleled protection against the broadest spectrum of attacks and threats such as malware, DDoS, unauthorized surveillance, and other malicious attacks. It can also protect your data safe from outbound violations and data loss prevention commonly caused by rogue employees or unauthorized access. Privafy lets you work assured without requiring dedicated security experts and a large technology stack with update and patch requirements. Privafy monitors and remediates threats before they can reach your data.

### Comprehensive

Cloud-native, patented technology integrates all the functionality of legacy point solutions—including encryption, firewall, DDoS protection, IDS/IPS, DLP technology and SD-WAN—for all enterprise environments.

### Easy-to-use

Privafy requires a single piece of inexpensive, plug-and-play hardware, and is deployed in minutes. Services can be precisely tailored to a company's needs and budget, and can deliver all the functionality of legacy security systems—with none of the vulnerabilities.

### Affordable

Privafy's annual cost is about 10% that of a typical enterprise security system, with no capital expenses—bringing enterprise-level security to businesses of all size.

When you secure your business and its data with Privafy, you can keep your focus on your clients and the strong relationships you've built. To learn more, please visit [www.privafy.com](http://www.privafy.com).

## About Privafy

For business leaders in charge of sensitive information, Privafy's security-as-a-service application has reimagined how to protect Data-in-Motion. The company's cloud-native technology integrates all the functionality of traditional point solutions to provide comprehensive protection as data traverses between locations, clouds, mobile devices, and the IoT. Deployed in minutes, Privafy is the only solution that works seamlessly with existing infrastructure to protect organizations of all sizes against today's most damaging data-centric attacks, all while disrupting the cost associated with complex, archaic network solutions.
